The City will provide contract administration, management services and technical reviews of services associated with the pavement inventory and management solutions project. It is understood that references throughout this document to items of work and services to be performed are the responsibility of the Consultant unless otherwise expressly stated as the responsibility of others.

2.0 COMPETITION INTENDED

It is the City's intent that this Request for Proposal (RFP) permits competition. It shall be the offeror's responsibility to advise the Purchasing Agent in writing if any language requirement, specification, etc., or any combination thereof, inadvertently restricts or limits the requirements stated in this RFP to a single source. Such notification must be received by the Purchasing Agent not later than five (5) days prior to the date set for bids to close.

3.0 CONTRACT PERIOD

Any resulting contract or contracts shall become effective upon executed contract and shall be effective through September 30, 2022. The City reserves the right to renew the contract for four (4) additional one-year periods, terminating September 30, 2026. The right is further reserved by the City to not renew the resulting contract at the expiration of any annual anniversary date by furnishing the Contractor with a thirty (30) day written notice.

A formal written contract with specifications will be entered into between parties. The proposal submittal shall substantially constitute the contract between the City and the Contractor. Formal written contracts will be drawn by the City, and all contract provisions that have not been stated herein will be drafted and included as necessary.

4.0 SCOPE OF SERVICES

Consultant will use an automated and fully documented approach to complete the project requirements. The project approach is summarized as follows:

- Assigning staff to perform the image capturing and pavement condition survey for the City's select roadway network
- Tasking experienced pavement engineers to review and analyze the pavement data and suggest pavement repair strategies for the City
- Communicate with all of the involved City members to complete the project tasks
- Use computer software application to create asset inventories and perform pavement rating
- Use computer software pavement application to analyze data, create reports, and estimate budgets
- Follow the proven production and QA/QC processes to carry out the service tasks
- Use a documented verification and acceptance approach to ensure the City receives the systems and services that meet all of the specifications and requirements
- Roads with more than two (2) travel lanes in one direction must be driven in entirety for each travel lane.

- Divided roadways must be traveled in both directions.
- Ramps must be driven and evaluated in all directions of traffic flow.

Project Setup

Project Initiation

Immediately after the contract award, Consultant will arrange a kick-off meeting to confirm the project requirements and scheduling. The kick-off meeting will include all of the proposed key personnel and the City's project members. During the meeting, Consultant will present the proposed Project Approach, which includes project equipment, software, methodology, schedules, and deliverables. The proposed approach will be finalized based on the City requirements and decisions during the meeting. Consultant will request that the City provide any existing database, previous inventory of street conditions, road centerlines, GIS layers, and aerial imagery for project use. Project communication protocol, documentation, accounting methodologies, data format, and standards will be confirmed during the meeting. Based on the final scope decisions of the project kick-off meeting, a project schedule of approximately 120 days will be finalized.

Data Preparation

Consultant will use the existing centerline data provided by the City and will create a pavement database based on the centerline layer. Each road segment record in the centerline layer will have a corresponding record in the pavement database. Consultant will work with the City to maintain the unique identifier of each of the road segments on the City road network so that the pavement database can maintain a persistent link to the GIS data.

Distress Rating Standardization

Consultant will communicate with the City to gather required information to define all of the distress types and treatment selections. Based on this information, a Pavement Condition Index (PCI) rating and treatment selection manual will be created to identify and define each distress type and its severity, extent, and treatment selection (similar methodology as US Army Corps of Engineer's MicroPAVER or approved equal).

Deliverables:

1. Meeting minutes, Project Implementation Plan, and Project schedule.
2. Pavement database based on the City's road centerline layer.
3. Pavement distress rating manual.

Project Management

Consultant will provide project management for the duration of the project, including coordinating and attending meetings with City, data research and collection efforts as required, preparing monthly progress reports, and schedule updates.

Deliverables:

1. Monthly progress reports and schedule updates.

Roadway Data and Image Capture

The Consultant will capture:

1. Roadway images from a minimum of 5 cameras (three in the front view and two rear view) at 1280x960 resolution at 25-ft intervals
2. Additional one camera at 4000x2600 resolution at 25-ft intervals
3. Downward scanning of the traveled lane as 11.5 ft by 11.5 ft images. Crack Scanning and automated crack detection data including density of longitudinal and transverse cracking categorized into low, medium and high severity levels.
4. The Rut Bar will be used concurrently with the image capture efforts to obtain transverse profile data to measure pavement deformation.
5. Longitudinal profile data along the traveled lane on the passenger side wheel path in IRI (International Roughness Index) format.

Consultant will capture roadway data in the following manner:

- Drive on the worst pavement condition lane of the road, most likely the right-most lane.
- Two lane non-divided roads will be driven in one direction.
- Non-divided roads with four lanes or more, and roads that are divided will be driven in both directions.
- Unpaved roads will not be surveyed.

Deliverables:

1. Roadway images in JPEG format.
2. Downward scan images in JPEG format
3. Point dataset with crack density information and GPS coordinates.
4. Longitudinal Profile data in IRI (International Roughness Index) format
5. Transverse profile data as Driver and passenger rut depth data.

Pavement Rating and Evaluation

Pavement Length and Width Determination

Each road segment will be attributed with length and width. The length will be calculated based on the centerline in the GIS layer. The width data will be obtained from the City GIS record. If this record is not available in the City GIS, Consultant will work with the City to at minimal cost, to perform width measurement using the captured photos and aerial photography to be provided by the City. Width will be measured at locations where a significant change in width occurs. To keep the project cost low, minor width changes such as turning lanes, widened lanes at intersections, etc. will not be captured in this run of the project.

Pavement Inspection and PCI Calculation

The application shall provide the flexibility for users to define repair method for each distress condition. The Consultant project team will discuss the City's current and long-term pavement management goals so that the City and the Consultant team can jointly confirm the best treatment solution for each distress type and severity level. The ultimate goal is to maximize pavement performance at a minimal cost.

The team will collect surface distress for flexible/composite pavement and for concrete pavement using the same methodology as MicroPAVER or approved equal.

1. The road distress types include 20 different types for asphalt pavement and 20 types for concrete pavement.
2. The road distress severity will be assessed at 3 severity levels (low, medium and high).
3. The distress extent levels will be estimated from 1 to 100% extents (by 1% increment).
4. The PCI (Pavement Condition Index) will be calculated based on ASTM and MicroPAVER deduction curves to calculate a 1-100 PCI index for each road segment based on the distress extent and severity. 100 will be a newly constructed road and 1 being a very poor condition.
5. The distress rating typically is assessed on road segments from block to block. If a road is very long and there is a significant change of road condition in the middle of the road, the road will be split as needed and separate conditions assigned for each segment.
6. Recommend that Major Arterials be driven in every travel lane in all directions to assure true pavement condition rating.

Select paved roads that are maintained by the City will be surveyed.

Pavement Repair Analysis and Budgeting

2. Configure the system to reflect the current and local costs for the repair methods.
3. Configure the system to reflect the preferred repair method and critical PCI thresholds.
4. Acquire estimated multi-year budget information from City staff and provide a draft multi-year rehabilitation program for review by City staff.
5. Run the automated repair recommendation program and produce a list of repair/rehabilitation candidates.
6. Work with City staff to review the rehabilitation program and modify analysis parameters iteratively to produce the final repair program required.

Deliverables:

1. Pavement database with localized decision tree and repair method configuration.
2. Textual report listing for various repair program candidates.

Consultant will train the City staff to perform these “what-if” analyses for future needs. The sub-tasks will include:

1. Setup a few repair strategies based on the Micropaver or approved equal template.
2. Execute the “what-if” analysis to produce condition projections.
3. Work iteratively with the City to modify the various strategy settings to derive different “What-If” scenarios to identify the optimum scenario.
